

## Optional 4th Stud Installation Notice

The optional 4th stud is included in case you experience excessive vibration when going off road. Your door may or may not have the corresponding provision for the 4th stud shown in the above. If your door does not have a provision and you intend to use the 4th stud, please seek professional installer or drill a pilot hole where you mark with a center punch before the actual drilling to prevent drill from walking all over the sheet metal.
